Installation tips

In this section you'll find important information how to work with Seduction, as well as getting support. Please read the following instructions carefully to prevent problems with installing the theme.

Requirements:

- **Server with PHP 5 support**
- **MySQL database**
- Install WordPress 3.0 or more on a server that supports PHP5 and make sure there is nothing on the server that causes conflicts.
- If this is not the case, send a request to your hosting provider because we cannot deliver support if your server does not support PHP5.
- Install "Seduction" and create a test page. Go to your browser to check if the page looks okay.
- After you created a test page you are ready to download and install plug-ins.

General Errors caused by plug-ins

In 95% of the cases the errors (that occur by installing Wordpress and/or a theme) are caused by plug-ins. If this happens, deactivate the plug-ins one at the time and check your website in your browser until you find the plug-in that is causing the problem.

Do you get “Internal server error 500?”

Don't panic! The problem usually can be solved after a few adjustments.

First of all you check if your server is supporting PHP 5. This is necessary to run Wordpress without problems.

If your server supports PHP 5, the error can be caused by plug-ins. Deactivate plug-ins and activate them one by one and keep checking your browser to determine which plug-in is causing trouble.

NOTE: Before you send us a request for support because of these failures, please first follow the steps that are described above. Most questions will be answered on the support forum at www.theme-dutch.com

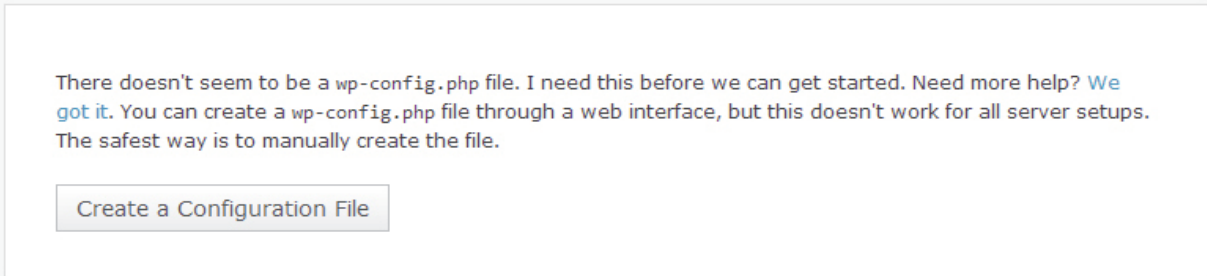

Important notice

"Please keep in mind that due to the open-source nature of Wordpress, a lot of plug-ins are written by small third-party developers who don't have the resources to test their plug-ins with every theme or every other plug-in on the market. For this reason, even though there are many well-written and stable plug-ins, more often than not, plug-ins are the source of conflicts and errors. For this reason, after installing the theme, we recommend installing one plug-in at a time, testing it thoroughly and only then proceeding to the next plug-in.

1 | Installing Wordpress

Install the latest version of Wordpress 3.0 on your server. You can download the ZIP-file for free at <http://wordpress.org/download/>. After unzipping the files you see a Wordpress-folder. Upload the complete folder to your server of your favorite FTP client. Pay attention: place the files at the root of your website. This location will be the URL of your website.
(<http://www.mycompany.com>)

Go to your URL using your browser and you'll probably see this report:

There doesn't seem to be a wp-config.php file. I need this before we can get started. Need more help? [We got it](#). You can create a wp-config.php file through a web interface, but this doesn't work for all server setups. The safest way is to manually create the file.

Create a Configuration File

2 | Adjust wp-config-sample File

During this process of installing you'll have to provide the config-file with your own data. Search for the file wp-config-sample.php and open it with your favorite editor. Change the information in to your database like following:

```
define('DB_NAME', 'mywebsite');
```

```
define('DB_USER', 'usermywebsite');
```

```
define('DB_PASSWORD', 'mywebsite1234');
```

```
define('DB_HOST', 'localhost');
```

Pay attention! Save the wp-config-sample.php file as wp-config.php and upload the file to your server.

Go back to your browser > <http://www.mywebsite.com> and when you filled in all data correct you'll see the following Welcom screen.

Welcome

Welcome to the famous five minute WordPress installation process! You may want to browse the [ReadMe documentation](#) at your leisure. Otherwise, just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Blog Title

Your E-mail

Double-check your email address before continuing.

Allow my blog to appear in search engines like Google and Technorati.

Install WordPress

Fill in the name of your website and e-mail address here and click: Install Wordpress.

Note: after installation you can change the Blog Title at any time.

You'll see the following Seduction and also arrive at the last process of installing WordPress. Admin always is standard.

You can change Admin as well as your password later on.

As soon as you log on to Wordpress, you'll get a warning that advises you to change your password.

Success!

WordPress has been installed. Were you expecting more steps? Sorry to disappoint.

Username admin

Password B@V8GSuhs9

Note that password carefully! It is a *random* password that was generated just for you.

Log In

If you want to log on after this step, go to /wp-login.php (e.g. <http://www.mywebsite.com/wp-login.php>).

Username

admin

Password

☐ Remember Me

Log In

[Lost your password?](#)

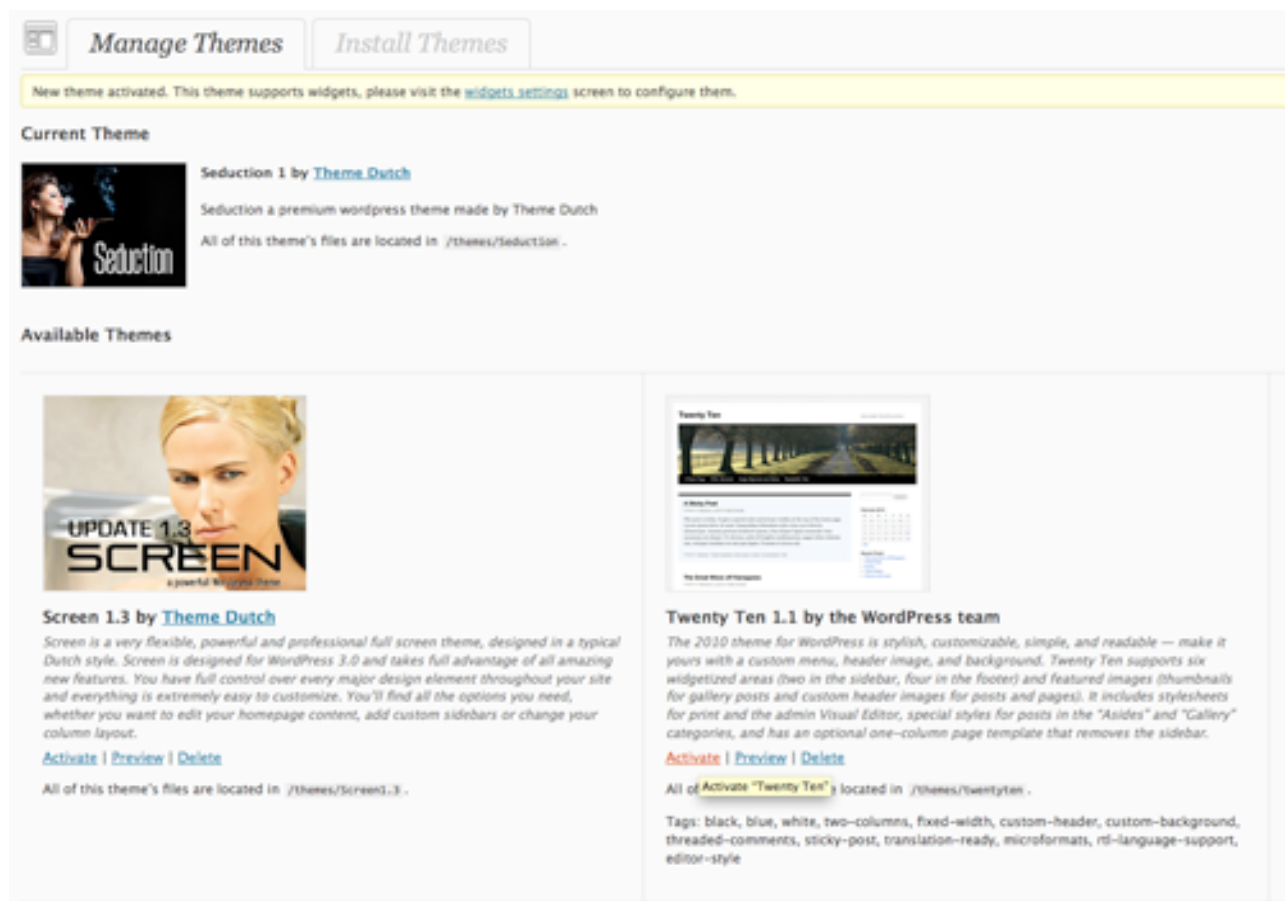

Enter your username and password here. Your Wordpress installation is ready now!

3 | Installation Seduction theme

After installing the Wordpress CMS you are ready to install the theme. Upload the theme to:

wp-content/themes

Go to Appearance and select Themes. If you installed the theme correctly you'll see Seduction. Press activate to use the theme at your website. Go to your website and you'll see that Seduction has been installed. Now you are ready to adjust the content and design of your website any way you want.

Note: Press Activate to use Seduction on your website.

4 | Build your website quick and easy

This manual guides you to build a basic menu and page structure in 10 steps. After following these steps your website contains the groundwork for your design.

Step 1:

First of all think about the structure of your Menu. This simplifies the building of your website during the following stages. Don't give the menu names that are very long or 'too long'.

Step 2

Create all pages according your menu structure. How to create a page you can read in this manual. Wait for placing the content, photos or plug-ins. Their turn will come later on.

Step 3

Define the Menus for the Header and Footer. Seduction has a feature to provide different links at the footer of every page and connects completely with the menu of Wordpress 3.0. The links are appropriate for SEO purposes.

Step 4

Define the Sidebar Menus. Seduction has a feature to create a personal sidebar for each page.

Step 5

Go to Seduction / sidebars and create the sidebar that you want to use on a page. Give it a name according your menu and press save.

Step 6

Go to Tab Footer Sidebars.

Create the sidebar you wish for your footer area and press save.

Step 7

Go to WP Dashboard / Appearance / Menus

At Theme Locations you select the sidebar you want to use for the Seduction main menu + Home Footer. At the top you'll see the sidebars that you've created in step 5 and 6. Select the sidebar you want to fill with menu items.

Step 8

In order to fill the menu you have the possibility to make use of Custom Links, Pages and Categories. Make a selection and Add to Menu. Save the Menu. Both, Wordpress and Seduction offer the possibility to create several menus that can be used in Widgets, Sidebars left and right and in the Footer Widget area. They also can be used on every page or post.

Step 9

Your Menu is ready. Go to Pages and select a page. Then go to Seduction page options beneath the content block. Here you'll find several features to design your pages or posts. To make the sidebars with widgets and custom menus visible at your pages you'll have to make 4 selections:

1. Page layout

What kind of page do you want to create? Full with or with sidebar left or right?

2. Sidebar

Here you select the sidebar you want at this page (made in step 5)

3. Footer sidebar

Here you select the Sidebar that has to be visible on the footer of this page.

4. Footer menu

Here you select what Link Menu you want to be visible in the Footer. Mostly here you find privacy, terms etc. This unique Seduction feature offers extra possibilities for SEO purposes.

Step 10

Congratulations, the basis of your website is clear now. The Menu structure is defined and the navigation is ready now.

Read more to discover what Seduction has to offer. Seduction has many and possibilities to give each website a different look and feel. The creative web designer has all possible options to make a unique website with the security of a reliable High end Wordpress theme.

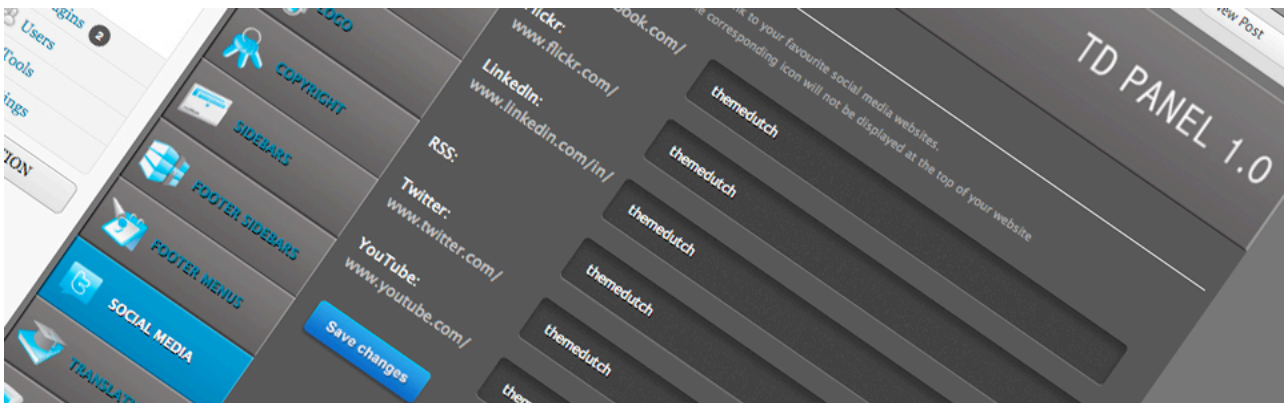

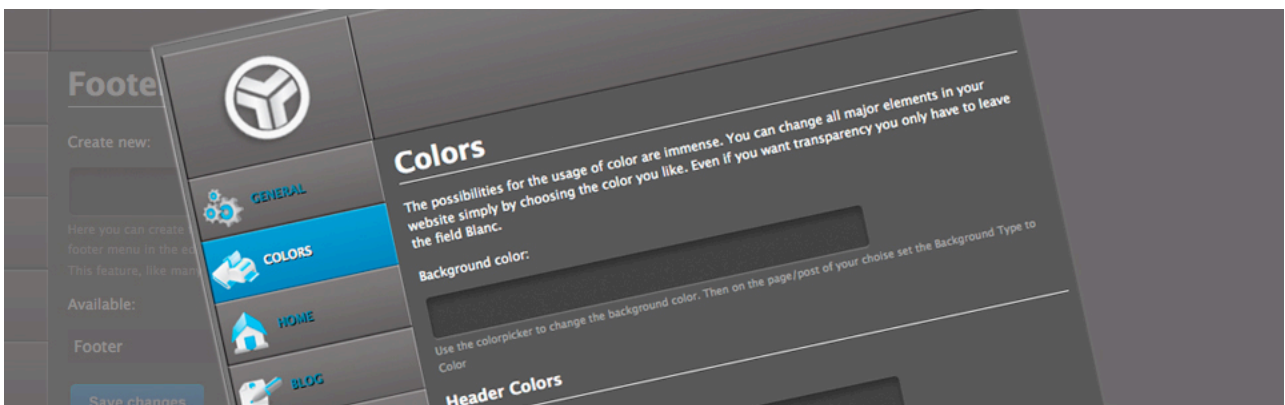

Design your pages

After you followed the previous steps you can start building the website: fase 2. Seduction is developed with usability in mind. That's the reason why you'll find tabs at the Seduction panel to adjust every aspect of your website.

5 | Seduction TD PANEL 1.0

Theme Seduction treats you with an exclusive, well-designed and very easy to use TD PANEL. This clear TD PANEL is designed for easy customization and to help your website up and running in no time! All major design elements for your website are visible at the tabs on the left: From general, colors, home, blog, logo to all kind of side bars, footer menus, social media, translations, Fs gallery and support.

Choose a tab at your TD PANEL and you'll get all the information you need how to use this function in a clear and well-designed environment.

6 I Seduction page options

On every page or post you'll find the Seduction option panel as you can see here. Here you can adjust every major part of your website like; payoff or header title (per example, the company slogan you want to use for yourself or your costumer), background, page layout, sidebar, footer sidebar and which footer menu should be visible.

These features directly on this page give you total freedom to design each page separately and to provide it with the right content, links etc.

Seduction page options / Seduction post options

NOTE:

Pages and Post pages have a lot of similarities. The Seduction page option panel is the same on the Post. (Gallery options are an exception)

9 | How to Create a slideshow on every page

You also will find a feature to add a separate slider on every page. You can display pictures on every page that perfectly match the page content.

Method:

Open the selection beneath the Grace options and the options for Slides or Videos appear. Choose Slides.

Now you have the possibility to adjust the height of the slide and also the time between slides in ms. Choose between thumbnails, squares or no indication for the available photographs. Do you want to use the time indicator? Select: yes. Your slides will be provided of a time indicator so the visitors of your website know when the next slide will appear.

It is possible, simply by clicking at the thumbs to go to the next or previous photo. You also see: Add new slide button.

Our advice is to create max. 5/7 slides, despite they are unlimited.

The screenshot shows a web interface titled "Grace options". At the top, there's a dropdown menu labeled "Grace this page:" with "slides" selected. Below this is a section titled "Slides options" containing several settings: "Slide width:" set to 960 px, "Slide height:" set to 250 px, "Time between slides:" set to 5000 ms, "Show slides:" set to "as thumbnails", and "Show time indicator:" set to "yes". There's also a "Select slide to edit:" dropdown showing "Slide #1" and an "Add new slide" button. The main section is titled "Slide #1" and includes a "Remove this slide" button. Below that, "Transition type:" is set to "Move vertical". The "Image:" field has a placeholder text: "Enter the full URL of your slide image (e.g. http://www.yoursite.com/images/slide.jpg)". Other settings include "Number of slices:" (max. 50), "Delay between slices:" (ms), "Transition time:" (ms) with a note: "For a smooth animation, make sure the transition time exceeds the number of slices times the delay per slice. (e.g. 20 slices x 50 ms delay = a minimum of 1000 ms transition time.)", "Transition easing:" set to "linear", "Invert y-axis:" set to "no", "Transition direction:" set to "From left", and "Fade in slices:" set to "yes". There are also fields for "Overlay title: (optional)", "Overlay text: (optional)" (with a "250 characters left" indicator), and "Overlay link: (optional)".

10 I Video support

How to Create a Video slider

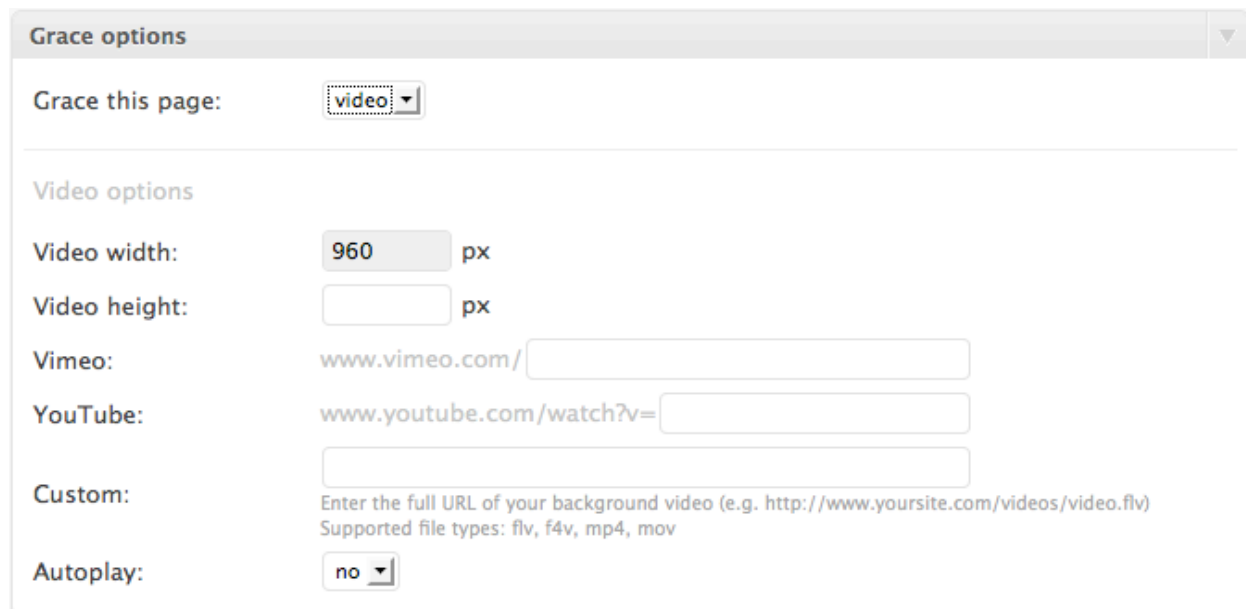

Open the selection beneath the Grace options and the options for Slides or Videos appear. Choose Video. Now you have the possibility to adjust the height of the video slide.

The width already is set and don't need any changes. You have the possibility to use Youtube, Vimeo and Self Hosted videos in the following file formats.

- **Flv**
- **F4v**
- **Mp4**
- **Mov**
- **You tube**
- **Vimeo**

Place your URL as described at Custom. Now you can select Auto-play if you want the video to start directly after opening the page (Auto-play: Yes) or no, if you want leave that up to your visitor of the website,

**Enter the full URL of your video (e.g.
http://www.yoursite.com/videos/video.flv)**

The screenshot shows a 'Grace options' dialog box with a dropdown menu set to 'video'. Below this, there are 'Video options' including 'Video width' (960 px), 'Video height' (empty), 'Vimeo' (www.vimeo.com/), 'YouTube' (www.youtube.com/watch?v=), and 'Custom' (empty). A note under 'Custom' says 'Enter the full URL of your background video (e.g. http://www.yoursite.com/videos/video.flv) Supported file types: flv, f4v, mp4, mov'. The 'Autoplay' dropdown is set to 'no'.

Grace options

Grace this page: video

Video options

Video width: 960 px

Video height: px

Vimeo: www.vimeo.com/

YouTube: www.youtube.com/watch?v=

Custom: Enter the full URL of your background video (e.g. http://www.yoursite.com/videos/video.flv)
Supported file types: flv, f4v, mp4, mov

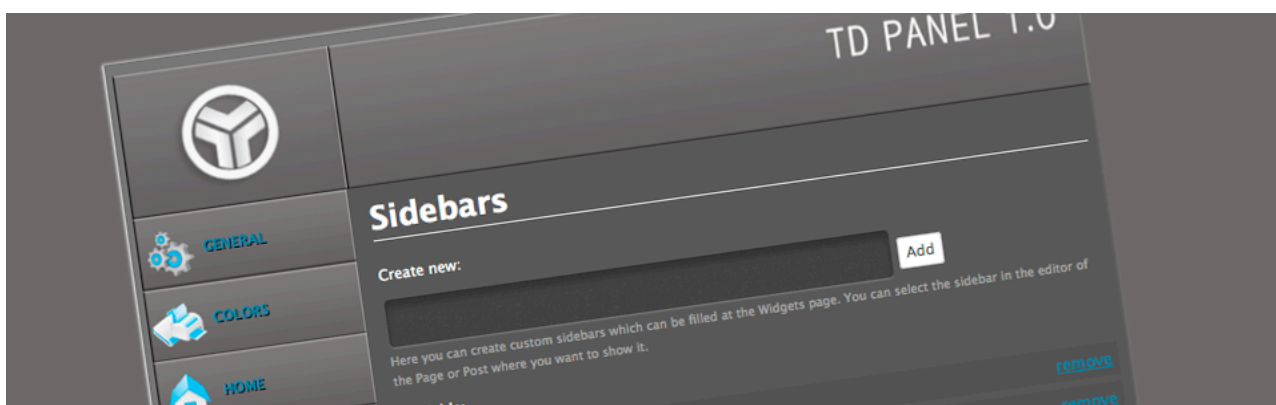

Autoplay: no

11 | How to create a sidebar

Create a sidebar

Seduction's feature to provide every page with a custom sidebar gives you full control over every aspect of your website.

Give an appropriate name to the sidebar you just made and go to Appearance > Widgets. You'll see the sidebar you just made. Fill in the widgets you want in the sidebar. Then go to the page where you want them to appear and select the option.

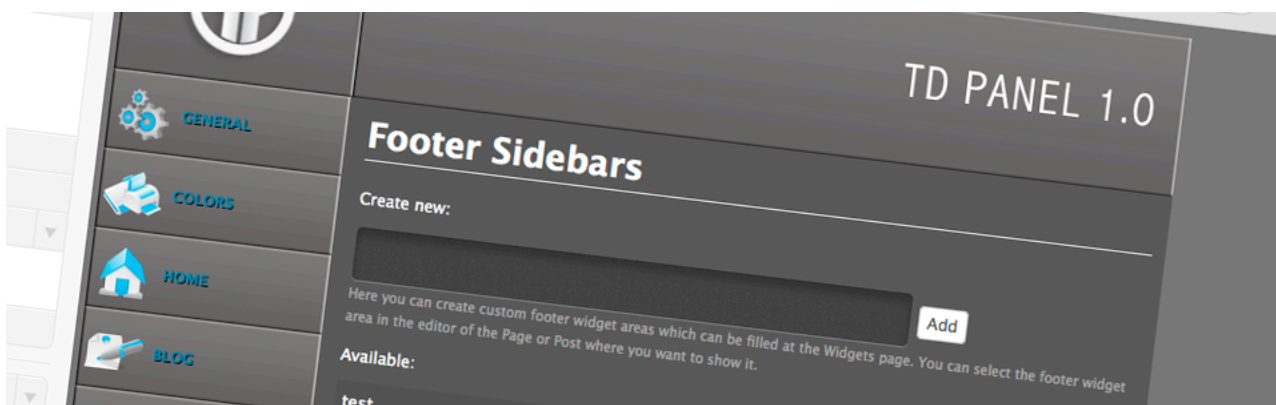

Sidebars Seduction option panel.

12 | How to Create a Footer sidebar

Here you also create sidebars that are visible at the bottom of a page or post. So, the footer widgets can be different on every page as well.

Create a Footer sidebar and go to Appearance > Widgets. Here you can fill the footer sidebar with widgets you've just made.

13 | How to Create a Blog

Creating one or several blogs is easier than ever now. Simply follow the next steps to create a blog on your website.

Create a Category for your Blog and give it a suitable name.

Place a post or posts in the category you just have made.

Go to the Seduction option panel and press on the tab-button.

Here you'll find several features to adjust the blog as you like. (Page layout, the number of posts on a page, background and the option to select a custom footer menu].

This is ideal if you want to place links to other blog categories in the footer menu.

Now go to Appearance > Menus. Add your Blog Category and place it in the menu as desired.

14 | How to Create a Multiblog

WP 3.0 has the possibilities to create several Blogs on your website.

Follow the instructions beneath:

Go to Posts

Add new

Create your post using the several options

Select the category you want to choose and save your post.

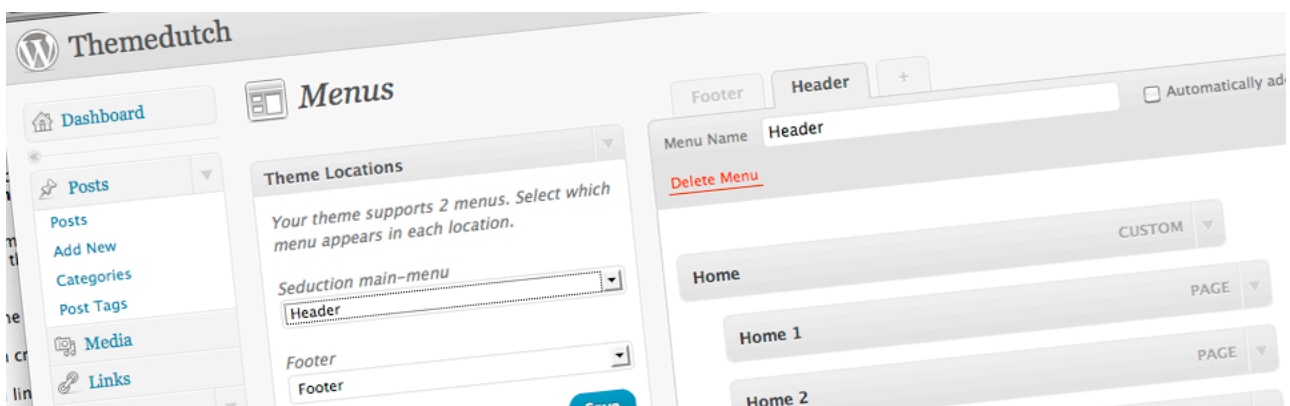

To adjust your several blogs into the menu: read Manual (14) Create a Menu Header and Footer.

15 | How to Create a Header and Footer Menu

Since WP version 3.0 it is easy to create a header or footer menu.

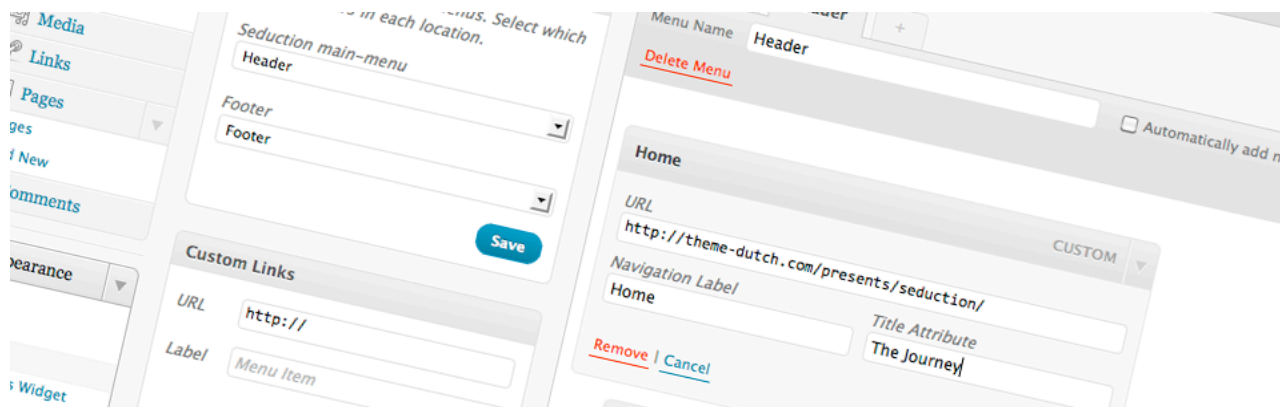

Go to Appearance > Menus and follow the next steps:

1. Create a menu, give it a name (for example: header) and press Save.
2. Select on the left side (beneath pages) the pages you choose and click: Add to Menu.
3. Click save Menu
4. Beneath Theme Locations you'll see the menu header that you'll have to select for your main menu.
5. Select your footer menu (that you can create as described above) and click Save.
6. Do you want to make use of external links? At Custom Links you can place every link you want and after that in your Header or Footer menu as well.
7. You can do the same for a Blog. Select the category you want and Add to Menu

16 | How to Create Menu Subtitles

Seduction has the possibility to create menu subtitles. Go to Appearance > Menus.

Open a Menu button and place the subtitle in the Title Attribute field. After you pressed save and refresh the page in your browser, your subtitle will be visible.

17 | How to Create a Page

Go to Pages and select Add New. Give your page an appropriate description and save it. Pay a lot of attention at the names of your page titles because they are visible on different places at your site. (Don't make the names too long) Think about the breadcrumb and the title block. Again, don't use too long names for your pages. Your design will be less nice. Besides that, your page description is important to be found in search engines.

You are ready to design your page now. There are several features to design your pages. You can read that at section **5 | Seduction page options**.

Don't forget to read section **18 | How to use Shortcodes**.

The SEO module offers the possibility to add page titles quick and easy, Meta descriptions, and Meta keywords. You also can place a background image alt without installing an extra plugin. Read more about the module at section: **6 | SEO built-in Module**. If you use this module, your website will be better found in search engines.

Seduction gives you the possibility to add a contact form on every page of your website to enlarge the marketing tool "Call to action". Read more about the contact form at section **7 | How to create a contact form**.

You will come at the section Grace option now and also to the option 'Grace this page'. This feature gives you the possibility to provide a slider or video at the page you choose. You can define the height of the slider or video yourself (except

the width). Read more about the slider at section **8 | Grace the slider with 450+ transitions.**

After you followed these steps go to Menus and add your page at the header and / or at the footer menu. Read more at section **14 | How to create a Header and Footer menu.**

18 I How to Create a Post

Go to WP dashboard and select Post, Add New. Then appears Add New Post that resemblance a page. In fact you'll find the same features as on a page here. More information to create a blog you read at section 16 I How to create a page.

19 I How to use shortcodes

Both on a page or blog you'll find **the icon** [] where you can click at to make use of the short codes. These are a perfect feature to design your page. Our advice is to work consistent. If you choose for a two-column preparation, then also use a column short code for your content. Here you'll see an example how to create a two column layout.

Open the short code menu and select: two column layout and insert it into your page.

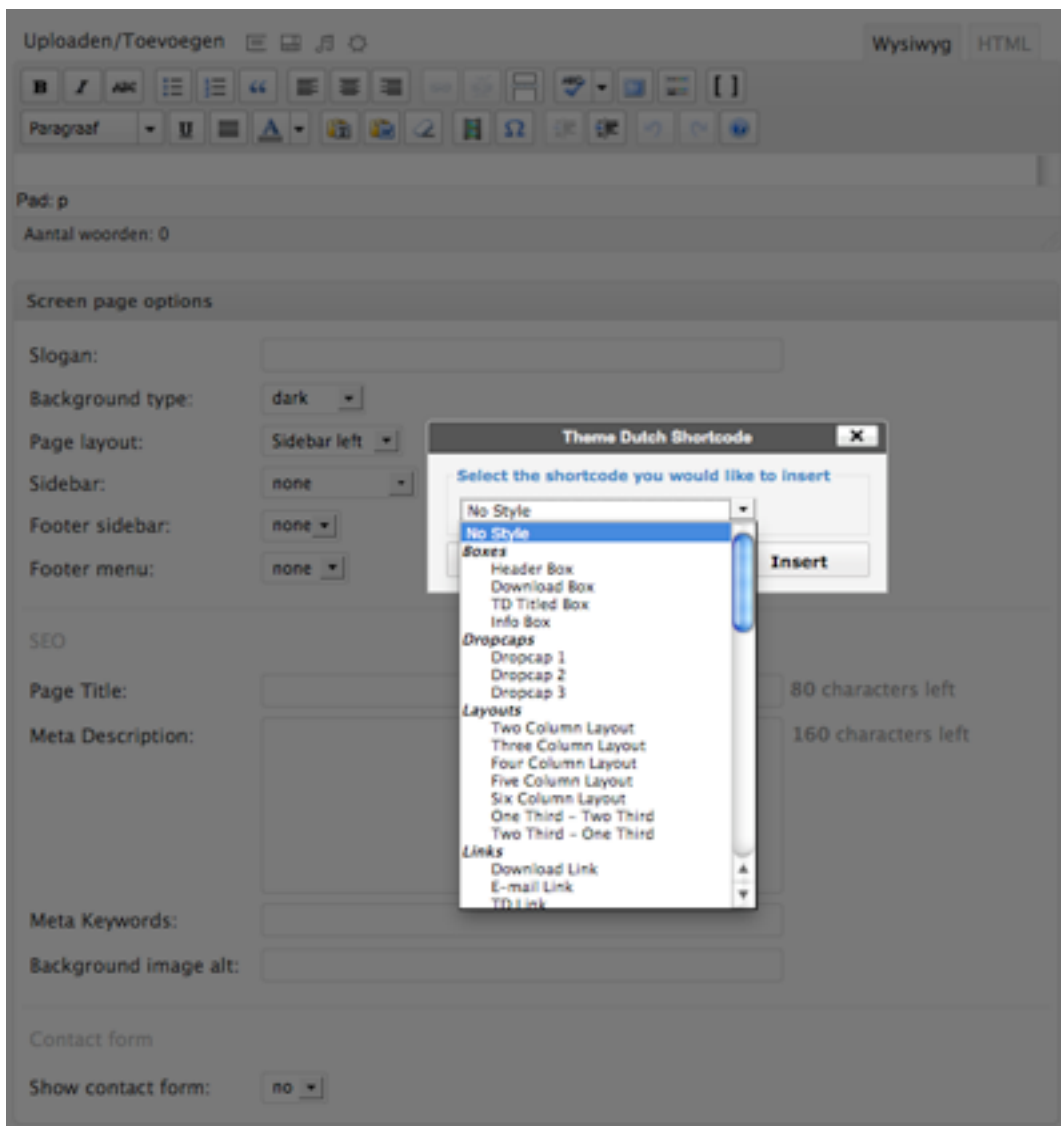

This is what you see:

```
[one_half]
Place your content here...
[/one_half]
```

```
[one_half_last]
Place your content here...
[/one_half_last]
```

Place your content as indicated above and save your page. When you look at your page in your browser, you'll see that your page has two column of content now.

All short codes work the same way and don't need any further explanation.

Galleria shortcode

Seduction has a 'new' shortcode that allows you insert an image/video gallery on the page/post you choose.

All that is required for this shortcode are some simple values that have to be submitted. The shortcode looks the following:

```
[image_gallery transition="fade" height="350" width="600" autoplay="true"]
[image src="http://yourwebsite.com/img/pic1.jpg" ]
[image src="http://yourwebsite.com/img/pic2.jpg" ]
[image src="http://yourwebsite.com/img/pic3.jpg" ]
[image src="http://yourwebsite.com/img/pic4.jpg" ]
[image src="http://yourwebsite.com/img/pic5.jpg" ]
[image src="http://yourwebsite.com/img/pic6.jpg" ]
[/image_gallery]
```

The first step will be to setup the height and width of the gallery. Then fill in the complete URL of the image(s) and you made a gallery all by yourself. Make sure your images and your size settings are the same.

You've got the following transition effect options:

- **fade**
- **flash**
- **pulse**
- **slide**
- **fadeslide**

The image gallery features an auto play function that can be turned on/off with the following: commands:

- **true**
- **false**

The following file types can be used for the video gallery:

- **Flv**
- **F4v**
- **Mp4**
- **Mov**
- **You tube**
- **Vimeo**

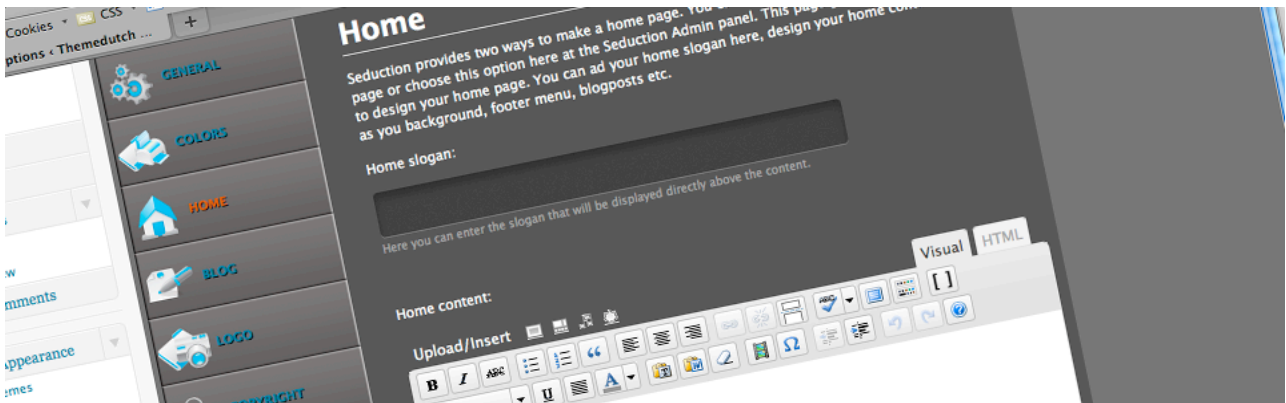

The video gallery features a thumb image with the following command: *video*
thumb_src="http://"

```
[video_gallery height="350" width="600" autoplay="false"]  
[video thumb_src="http://" video_src="http://" ]  
[/video_gallery]
```

NOTE: Shortcodes, like pullquotes and gallery are best placed within the column layouts of Seduction. This ensures that no elements get pushed out of order!

20 | Home page features

The Home page can be created through the **Seduction TD PANEL** and has been updated with some great features. The user now has the ability to display blog posts and full Screen videos on the home page. The Grace slider has been added to make the design complete!

If you want to feature your home page with a full Screen video select the **Background type** video and fill in the complete URL of your video. The supported file types are [flv, f4v, mp4, mov].

When you prefer to display blog posts on your home page select **Display blog posts** and select the category to display. For a full design you can use the Grace slider.

21 I How to Create a Gallery/Portfolio

To make a Gallery or Portfolio starts with creating a Post. Please read the following instructions carefully.

Short walkthrough

Go to WP dashboard and select Post, Add New. Then appears: Add New Post.

Beneath the content block you'll see Gallery options/ Gallery video. Here you can insert a photo or a video with the following file formats.

Support Video files: flv, f4v, mp4, mov

If you selected your photo or video, you're ready to adjust further options at Seduction Post options. Read more **5 I Seduction page options**

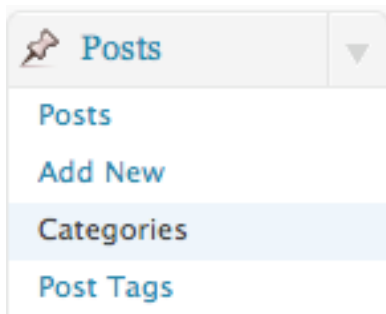

If your Gallery also contains items like text, it automatically will visible beneath at the page in the gallery block. This text also is provided with 'Read More' automatically if you don't exceed the limit.

Step by step setup

Creating a full Screen Gallery

Step 1

Create a new category for you gallery

On the Categories page create your categories.

Categories

Screen Options

Help

Add New Category

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Parent

None

Categories, unlike tags, can have a hierarchy. You might have a Jazz category, and under that have children categories for Bebop and Big Band. Totally optional.

Description

The description is not prominent by default; however, some themes may show it.

Add New Category

Bulk Actions

Apply

<input type="checkbox"/> Name	Description	Slug	Posts
<input type="checkbox"/> Blog		blog	10
<input type="checkbox"/> Gallery		gallery	0
<input type="checkbox"/> seduction		seduction	10
<input type="checkbox"/> test		test	0
Uncategorized		uncategorized	0
<input type="checkbox"/> Work		work	10
<input type="checkbox"/> Name	Description	Slug	Posts

Bulk Actions

Apply

Note:

Deleting a category does not delete the posts in that category. Instead, posts that were only assigned to the deleted category are set to the category **Uncategorized**.
Categories can be selectively converted to tags using the [category to tag converter](#).

Enter a name for your category and enter the slug for a search engine friendly link. Then press create category.

Step 2

Activate the categories to use as gallery. To do this, navigate to **Seduction Admin Panel > Gallery**. Here you can select the categories and effect you want to use and don't forget to press 'save' once you are finished here.

Step 3

Navigate to posts

For the final step you'll have to create posts you can use to fill the gallery. So press Add New.

Full Screen Gallery options

Gallery image:

Enter the full URL of your background image (e.g. <http://www.yoursite.com/images/background.jpg>)

Gallery video:

Enter the full URL of your background video (e.g. <http://www.yoursite.com/videos/video.flv>)
Supported file types: flv, f4v, mp4, mov

Gallery website:

Enter the full URL of your website (e.g. <http://www.yoursite.com>)
For a thumb image of your video / website, provide the (Gallery image:) with your image.
Any size will do, Screen will automatic resize them for you.

At the page you created you enter a title for you post. Select what you want to use (video, website or images) beneath the content block.

NOTE: If you use images, thumbs will be made automatically. If you select website/ video you'll have to create thumbs by adding a picture on the image line [Could be a Seduction shot for instance]. That picture will create a thumb for you video/website.

If you've entered the links correctly, you can select (on the right side) which category you want this post to be filled with. For instance, you name a category Black & White and you set it to be used as a gallery category: Select it here on Create post and the image/video/website you've filled in will be displayed there.

You also can fill the content block just like a normal page. This makes it possible for you to add more info about the gallery item. For instance, you made a picture and want show users you made it; just enter the text in the content block, or design it like a normal page. Once the user visits the gallery, a read more 'link' will be displayed, so the user gets redirected to the post.

22 | Gallery/Portfolio Slide down menu

The concept of Seduction is that all content must be visible full Screen. This is why the Slide down menu automatically can disappear when you want to. **Just click on the arrow and the menu will disappear into the Footer.** But, for the Ultimate gallery experience, click on the resize icon on the top left of your Gallery menu and the top header navigation and footer will smoothly slide away. It gives you a Full Screen Gallery/Portfolio experience.

Features Slide Down Menu

The menu only provides information and features that are necessary to give the visitors of your website a unique (Gallery) experience.

If the Menu in the Footer is present, the arrows at the right give you the option to slide through your Gallery's. Click at the category you want and the Gallery/Portfolio brings you to the series of photos or videos you want. Beneath the arrows you will see how many pictures/videos are left in that particle category.

Features Gallery Menu

- Selection of gallery's with notice of the gallery title
- Overlay text with Read more link (optional)
- Auto play with fade effect + time adjustment
- Slide Header and Menu away by click on the resize icon.
- Menu close/open

23 I Translation Ready

We thought about the smallest details and because we understand our theme will be sold worldwide this Gallery is Translation Ready. You can adjust (translate) the language at your Seduction admin panel beneath Translations.

24 I It's not a bug, it's a feature

NOTE: As soon as you watch a video an icon will appear in your Seduction (play/pause), but it will disappear when you move your mouse away of the image.

25 I Support

If you need any support, have suggestions or you just want to ask a question. Go to www.theme-dutch.com/support and create your login account.

26 I Guidelines for support

To make use of our free support you have to send us an e-mail through www.themeforest.net and request a free membership. Mention your e-mail address and which theme you bought. As soon as we receive your request, we will prepare a free support-membership account that you can use after you received our log in information in your mailbox.

Note: Use the same e-mail address that you have used for registration at Themeforest. Only then we can verify which theme you've bought and if you have the right to free support.

As soon as you log in to our membership section, you can see what support you can get.

You will find everything you need in your special support environment; from manuals to video manuals. You can also post a message on our blog if our information is inadequate and you have a request for our support team.

Our support team's goal is to handle every request quickly and correctly. During office hours we will try to answer immediately, but always within 24 hours on Monday to Friday.

27 | Services

Our team of web designers and web developers are always standby if you want to make adjustments to your website.

28 | Seduction Warranty

Seduction is provided in a state as downloaded via your Themeforest.net account. We guarantee a professional working Seduction theme if you follow our advice, guidelines and installation instructions of Wordpress 3.0.

29 | Contacting Theme Dutch

Theme Dutch is a division of studio mikmak, advertising agency and is based in the Netherlands.

Theme Dutch

Koningin Regentesselaan 44
6043 CM Roermond
The Netherlands

30 | Installing dummy content for Seduction

Press the general tab (admin panel) and locate Dummy content. Switch it from Don't place dummy content into Place dummy content, and press Save Changes. The post/pages will be implemented on your WordPress installation. The only thing that's left is to setup the menus and you'll have a preview of what you can do with Seduction.

31 | Permalinks, the finishing touch

This step can be skipped, but for your users and SEO purposes you can make the http:// links a bit more readable for your visitors and increase the chance for you to be found in search engines.

So under Settings > Permalinks, you edit them. On this page you will see 5 options under Common Settings. Let's start with an example. Click on Month and name and see what happens.

You see this structure appear under Custom Structure:

```
/%year%/monthnum%/postname%/
```

if you want your http:// link to resemble the page/post name you'll have to put in the following structure under Custom Structure::

```
/%postname%/
```

your links will now appear like <http://www.yoursite.com/contact> etc.

If you save this and all goes well, you have your permalinks working. If you get an error that tells your .htaccess is not write-able you have to follow these steps.

- Copy past the given code from Wordpress
- Open a text, edit program like, Notepad or TextEdit
- Paste the given code from Wordpress in the text file
- Save it and it doesn't matter if it's saved as .txt extension
- Upload the text file into the root directory where you've installed Wordpress
- Then rename it to .htaccess
- When you rename it don't put any .txt/.doc extension etc. behind it
- Reload your admin panel, you should be up and running now

NOTE: If you still get an error follow the last steps because some extra code maybe in you .htaccess that will make Wordpress not read it properly.

- Go to your ftp and locate the .htaccess [it may not be visible since it's a hidden file. In this case go to your preferences of your ftp and set show hidden files]. Now you should be able to see the .htaccess file.
- Click it and choose edit with Notepad, TextEdit or Dreamweaver etc.
- Select all the code and delete it, then copy past the code from Wordpress that still is in your computers memory.
- Save the file and you see a prompt of your ftp program saying uploaded successfully
- Go and reload your admin panel and your site should be back and running with permalinks

32 | Breadcrumbs

Seduction is featured with the option to enable a breadcrumb on your page.

Navigate to your page or post and select the desired parent under Page

Attributes. The breadcrumb will then feature the parent and it's child in the link.

33 | PSD files

Seduction features mostly color pickers, that allow the user to adjust the color settings of the template.

The template also includes 3 psd files

- header-bg.psd (Changes the dropdown menu color)
- gallery-bg.psd (Changes the gallery holder color)
- dividers.psd (Changes the colors of the divider shortcode .png's)

The header-bg and gallery-bg files are included because Internet Explorer has got some known transparency issues.

Opening in Photoshop and to change the color settings can alter the .psd files. Then simply save it as a .png upload it to the images folder.
